

Kamrup College, Chamata

Free Plant Sapling Distribution & Environmental Awareness Programme

As part of 42nd Green Week initiative organized by the Government of Assam in collaboration with Social Forestry Division along with Office of the Range Forest Officer Social Forestation, Nalbari at Kamrup College premises, an environmental programme movement was held on 11th May 2022. At the end of the programme, distribution of about 1500 plant saplings was held among the students, teachers and staff of the college. To create an awareness among youth and students, environmental NGO Green Globe gave a brief presentation to emphasize the importance of planting trees and also how to live a sustainable lifestyle that is environment friendly by minimizing our use of plastic thus taking small steps at individual level to protect and slow down our planet from the adverse effects of global warming and climate change. While sharing his experiences of life with the audience Forest Officer Mukut Das gave some valuable insights to the students. There was also prize distribution ceremony for a poster competition that was held earlier. Apart from this initiative, the fact remains that our college is situated at an eco-friendly environment and while

keeping in mind the importance of nature, how the oxygen that we breathe is sourced from trees and how it is essential for human survival we as a community has always co-existed with nature through our eco-friendly efforts like plantation drives in the areas adjoining near the college. Together with the fact that we have a college environmental cell that takes up various activities like planting tree, flower plants from time to time and taking care of the college garden inside the campus. There is also an active NSS Green Club at our college that organizes environment related activities. We, as a community of students, teachers and staff understand and has always been raising awareness related to environment and how much dependent are we with nature while trying to explain how the man-made problems of deforestation are all related to humans destroying our mother earth in the name of development and industrialization. We, at Kamrup College believe living, co-habiting and co-existing with nature is the surest way to a balanced eco-system, healthy and eco-friendly living without destructing and harming our environment.
